Installing VMware Workstation 7.1.4 on Windows 7

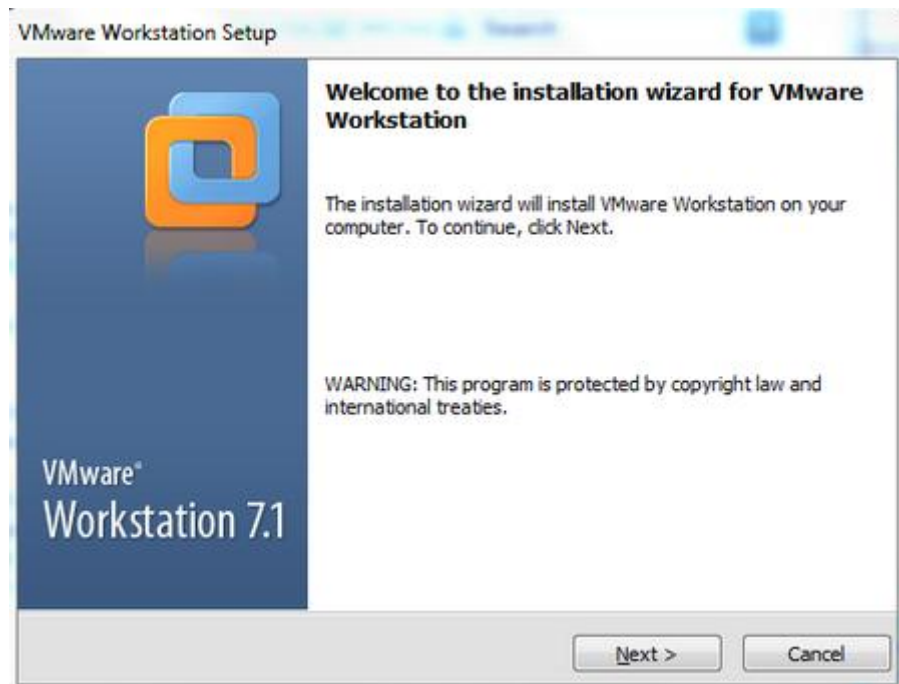

First we'll need to download the VMware Workstation software, which can be done here:

http://downloads.vmware.com/d/info/desktop_downloads/vmware_workstation/7_0

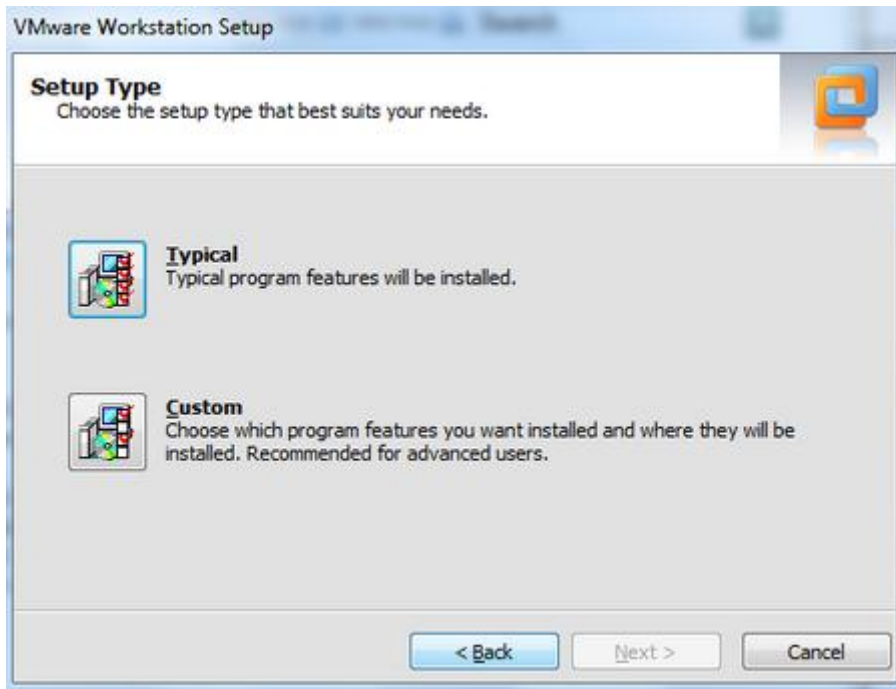

If downloaded we can begin the installation:

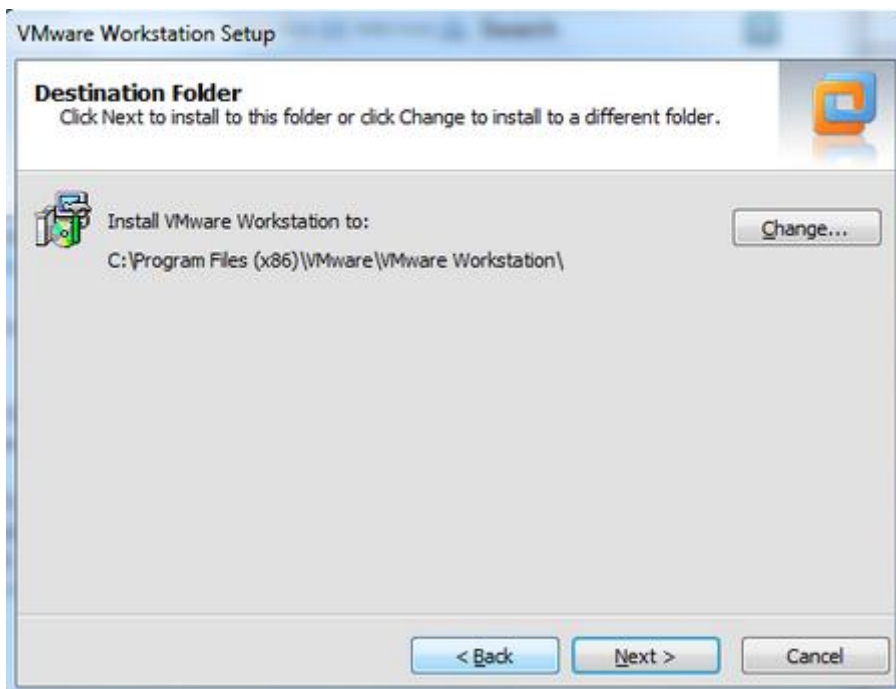

Double click the downloaded exe file, the following screen will popup:

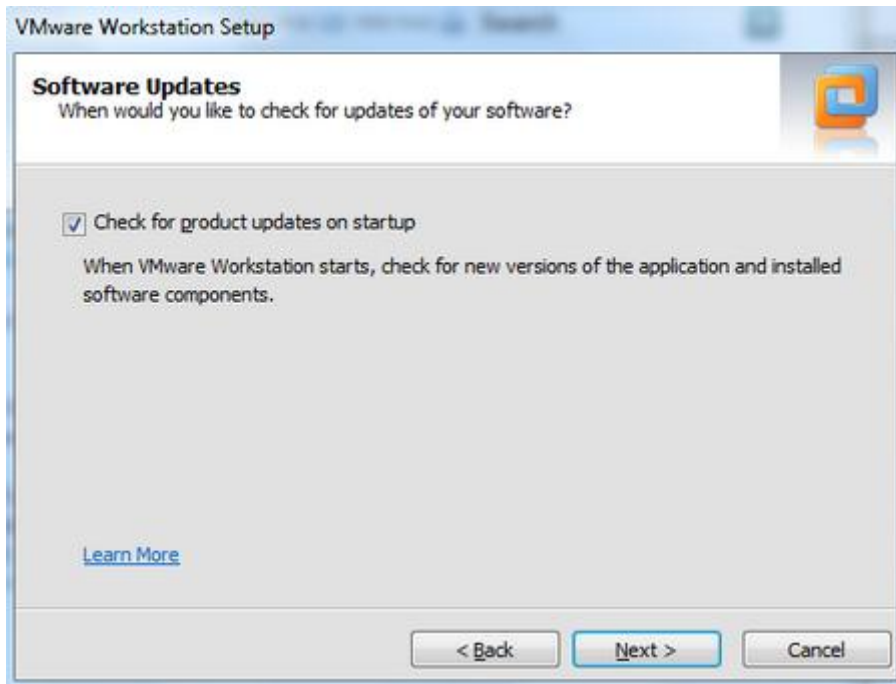

Click Next, the following screen will popup:

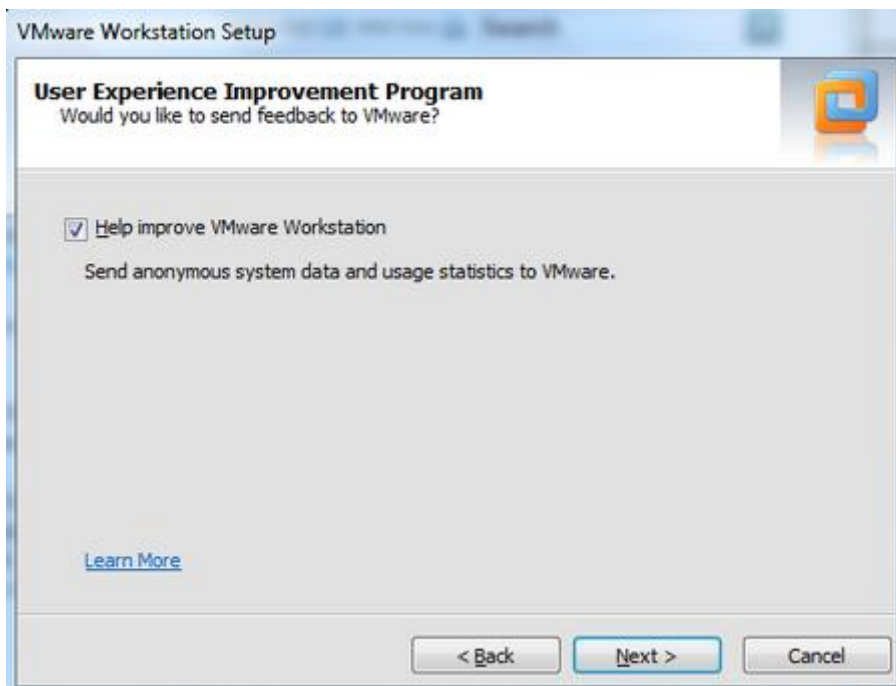

Click Typical, the following screen will show:

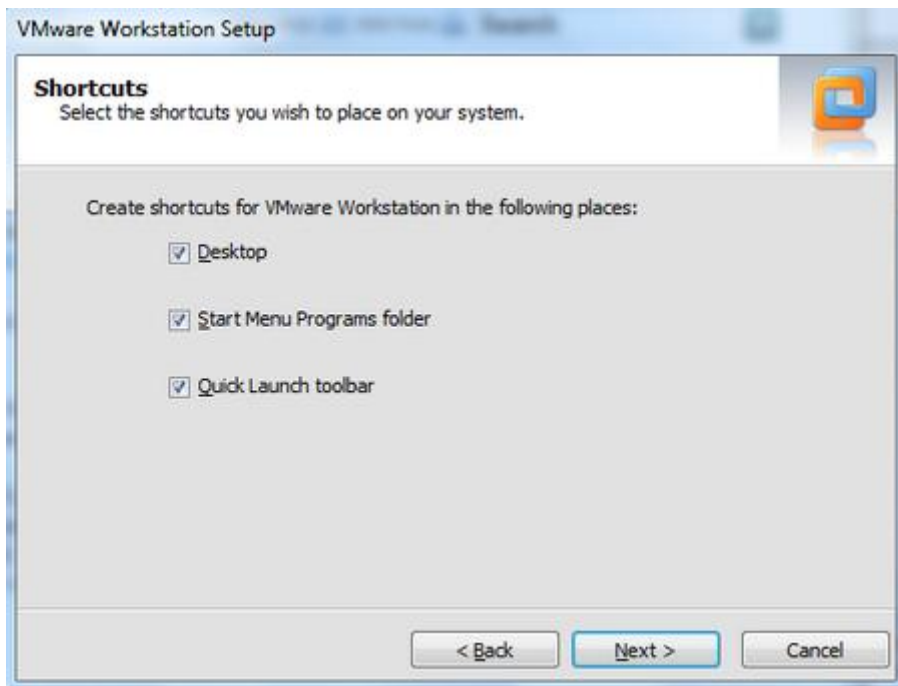

Provide the destination folder in which you want workstation to be installed and click Next. The following screen will show:

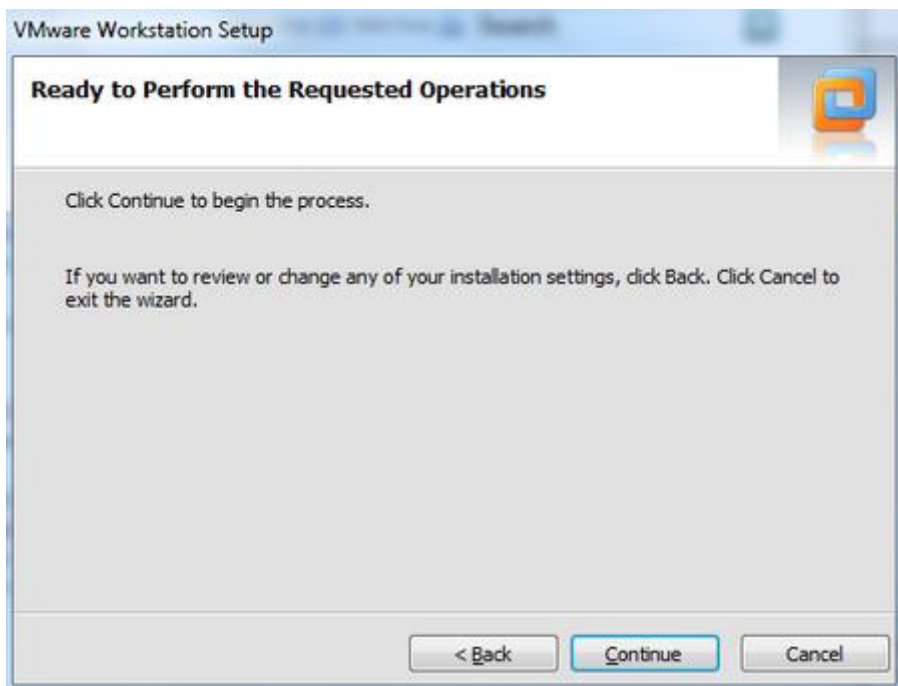

Leave the default setting (Check for updates) and click Next. The following screen will show:

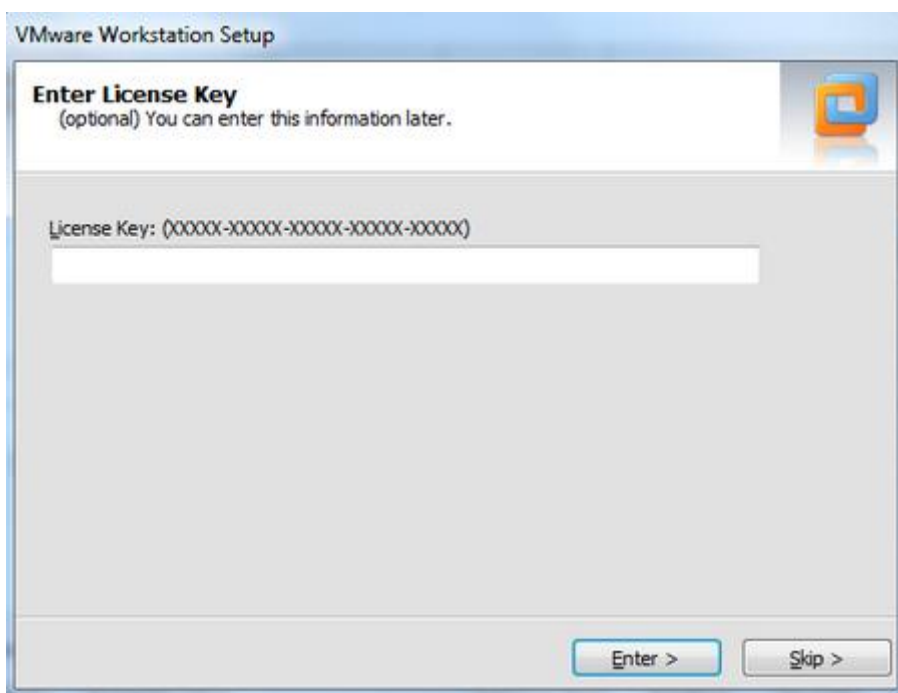

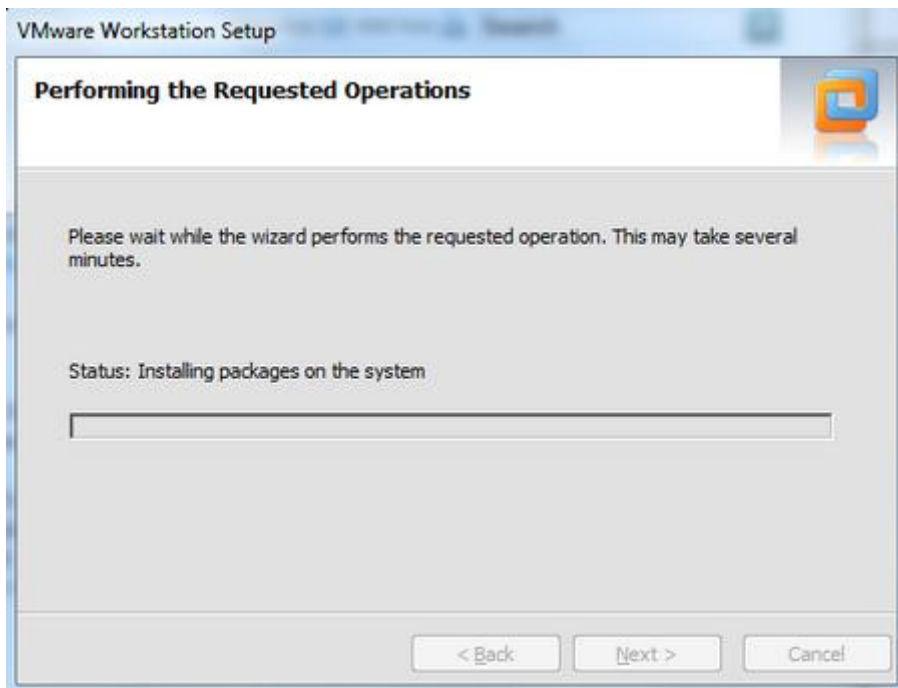

Choose if you want to help improve Workstation (or not) and click Next, the following screen will show:

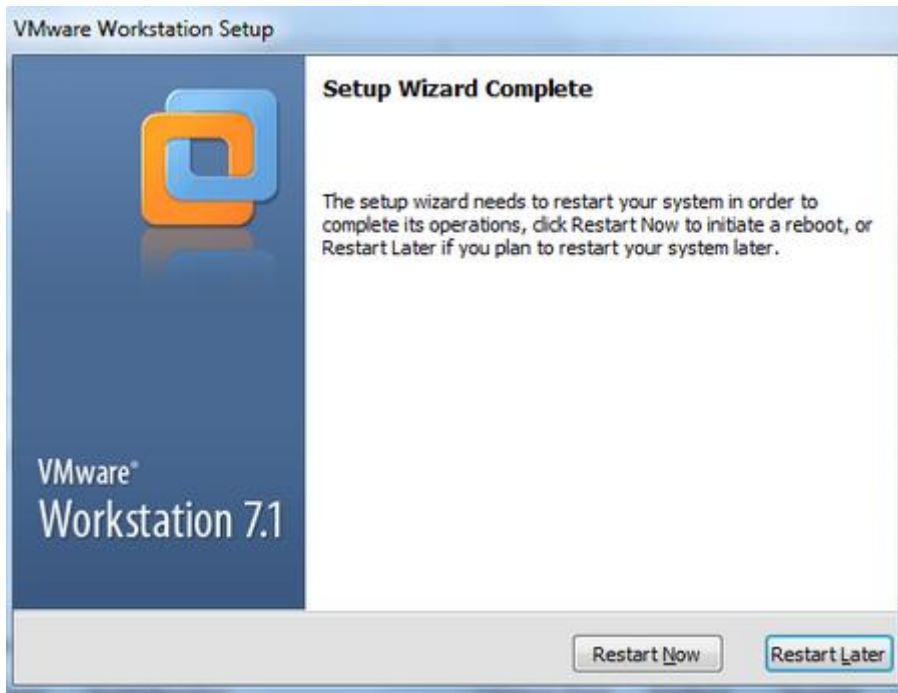

Choose the shortcuts you want to create and click Next, the following screen will show:

Press Continue to start the installation, the following screen will show:

After a while the installation will ask you to provide a License Key. Provide the license key (Trial needs a key too), the following screen will show:

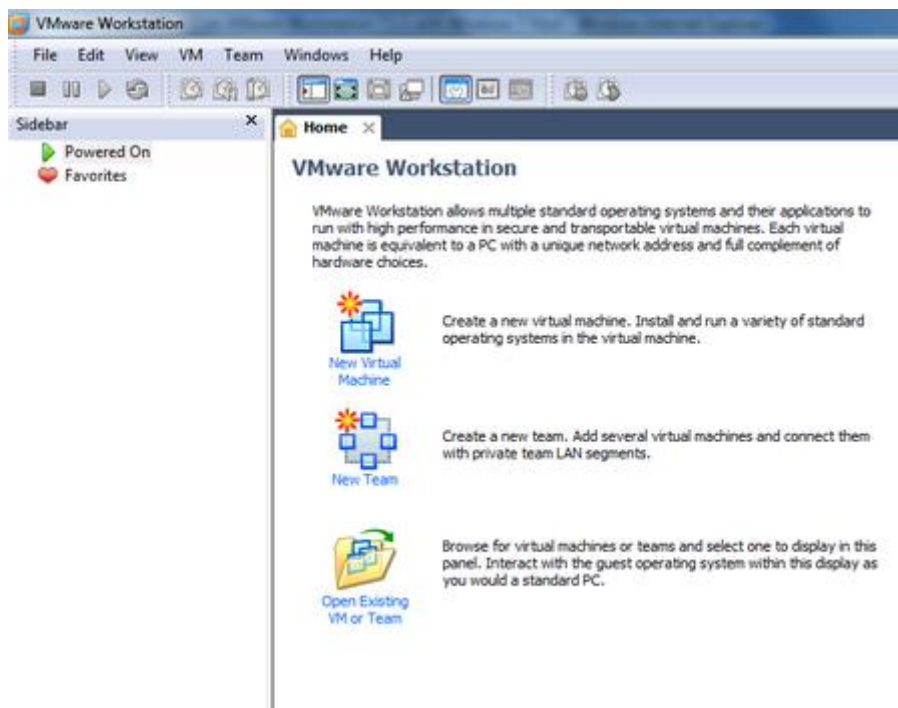

Click Restart Now to restart the computer.

Depending on your choice where to install the shortcuts just find one and open workstation. The following screen will show:

Accept the license agreement and click OK. The following screen will show:

The installation of VMware Workstation is done. Take a look around all the options provided (make sure to check Edit --> Virtual Network Editor to see the network options) and get familiar with VMware Workstation.

Also take a look at the documentation provided by VMware:
